U.S.G.S. 7.5 Minute Las Cruces, New Mexico, Quadrangle, Universal Transverse Mercator Coordinates (center of runways): E 32.944408 N 106.41993 Zone 13S, NAD 1983

Construction: 1984-1985

Architect: Not known
Builder: Not known

Present Owner: Commander, U.S. Army White Sands Missile Range, New Mexico 88002-5018

Present Use: Vacant

Significance: The Fire Station No. 4 was an essential component of the White Sands Space Harbor (WSSH) from 1984-2011. It is considered to have national significance and is eligible for listing in the National Register of Historic Places (NRHP) under Criterion A for its association with the NASA Space Shuttle Program (SSP) with a period of significance of 1976-2011. Because it achieved significance within the past fifty years, Criterion Consideration G also applies.
Report

PART I. HISTORICAL INFORMATION

A. PHYSICAL HISTORY

1. DATE OF CONSTRUCTION

The Fire Station No. 4 was constructed from 1984-1988.

2. ENGINEER

Not known.

3. BUILDER/CONTRACTOR/SUPPLIER

Not known.

4. ORIGINAL PLANS

Not available.

5. ALTERATIONS AND ADDITIONS

Around 1988, the building was covered with spray foam insulation. The covered vehicle bay was enclosed around 2005. All electronic equipment, machinery, and furnishings were removed once the facility was vacated in 2011. The U.S. Army initiated occupation and reuse of the facility in the summer of 2012.
PART II. STRUCTURAL/DESIGN INFORMATION

A. GENERAL DESCRIPTION

1. CHARACTER

The Fire Station No. 4 (NASA Inventory #51) is a freestanding prefabricated metal building connected to the northwest corner of the HUB Maintenance Facility’s carport. The Fire Station was operated and staffed by the U.S. Air Force from nearby Holleman Air Force Base at WSMR. Like the HUB Maintenance Building, it rests on a concrete pad and the exterior walls are covered with spray foam insulation as a measure of protection from the harsh desert environment. The shallow gable roof is covered in metal panels.

The Fire Station features a small shed roof wing housing the kitchen and bathroom at the southwest corner; it too is made of prefabricated metal covered in foam core. A small fixed pane window is located on the west elevation of the kitchen wing, which is finished on the interior with sheetrock walls. The high-ceiling garage on the south side of the building has fixed pane windows and a metal pedestrian door on the south elevation and a metal garage door on the north elevation. The interior has exposed metal walls and a drop ceiling.

A covered vehicle parking area was originally located at the northwest corner of the Fire Station. It featured a concrete pad floor and metal shed roof supported by steel columns. The carport was enclosed around 2005 with metal panel walls and converted into a multi-purpose waiting area. Accessed by a metal pedestrian entrance on the north elevation, the enclosed space has sheetrock walls, tile floor, and a dropped ceiling on the interior. A concrete sidewalk is located along the north, east, and west elevations. A modern HVAC unit is located on the exterior of the west elevation.
2. CONDITION OF FABRIC

When documented in March 2012, the Fire Station No. 4 had been abandoned for over six months, but was in fair condition. The interior equipment had been removed and the exterior was showing signs of neglect due to the harsh desert environment, which requires that facilities are constantly maintained and repaired due to shifting sands, flash floods, and extreme temperature variations.

B. CONSTRUCTION

The Fire Station No. 4 is constructed of a prefabricated metal building on a concrete pad.

C. MECHANICAL/OPERATION

The Fire Station No. 4 featured electricity to power interior lights, electronic navigational equipment, radios, and wall-mounted air conditioning units. Non-potable water was supplied by a freestanding water tank to the south. Generators provided back-up power. The Fire Station was maintained and operated by the U.S. Air Force.
PART III. SOURCES OF INFORMATION

A. ENGINEERING PLANS AND DRAWINGS

There are no original engineering plans or drawings for the Fire Station No. 4. NASA staff created an as-built, not-to-scale site plan, which was used as a base map for this report (Figure 2).

B. EARLY VIEWS AND HISTORICAL DATA

Historic photographs and maps of the WSSH are very limited. Some of these views can be found on pages 18-20 of this document. All views are captioned and dated as available. The other historical data comes from a variety of sources cited in the Bibliography below.

The historic photographs and most of the historical data used in this documentation came from sources within WSTF and WSSH. Other more current imagery was obtained from the online WSTF Media Archive. Many of the original photographs have been donated to the WSMR Museum for digitization and curation. A body of recent aerial photographs were located and photocopied for inclusion in the HAER document to supplement the current ground photography.

C. INTERVIEWS

The following NASA and WSMR employees were interviewed for this documentation.

Robert E. Mitchell, WSTF Manager, September 2011.

Frank Offutt, WSSH Manager, September 2011.

Timothy Davis, WSTF Historic Preservation Officer, September 2011 and March 2012.

Bill Godby, WSMR Historic Preservation Officer, September 2011.

Doyle Piland, WSMR Museum Archivist, September 2011.
D. BIBLIOGRAPHY

__________. “NASA-Wide Survey and Evaluation of Historic Facilities in the Context of the U.S. Space Shuttle

United States Army. “Final Environmental Impact Statement for Development and Implementation of Range-Wide Mission and Major Capabilities at White Sands Missile Range,
E. LIKELY SOURCES NOT YET INVESTIGATED

Research was conducted at WSSH and WSTF using primary and secondary sources. Sources that were not investigated that may contain secondary information are archived at NASA’s Lyndon B. Johnson Space Center in Houston, Texas.

Additional oral history interviews with other engineers and technicians could also prove useful.
PART IV. PROJECT INFORMATION

In 2011-2012, New South Associates (NSA), under contract with InoMedic Health Applications, LLC (IHA) of Kennedy Space Center, Florida, and in coordination with NASA and the U.S. Army, conducted background research and a historic architecture survey of resources at the NASA WSSH. The survey included the documentation and evaluation for NRHP eligibility for seventy-two resources located in four distinct areas. Based on this research, NSA determined that no properties remain at WSSH from the period prior to NASA acquisition in 1963 except for the footprint of the packed gypsum Runway 17/35.¹

NSA recommended that the three NASA WSSH Runways and the Control Tower in Area 1 were individually eligible for listing in the NRHP and eligible as contributing resources to the “WSSH Shuttle Landing Facility District” under Criterion A and Criterion Consideration G for their association with the NASA SSP. None of the other sixty-eight inventoried properties were recommended individually eligible for listing in the NRHP due to lack of historical association with the NASA SSP or other historic contexts, lack of unique design or construction features, or insufficient integrity; however, nineteen of these properties, all of which lie within Area 1, were recommended as contributing resources to “WSSH Shuttle Landing Facility District,” even though they were not recommended individually eligible for the NRHP. The historic district contains a total of twenty-eight resources: twenty-three are contributing and five are non-contributing.

After formally ending the SSP on August 31, 2011, NASA disposed of the WSSH and released use of the property to the U.S. Army WSMR. The property transfer was a federal undertaking on federally-owned property and subject to compliance with Section 106 of the NRHP Act of 1966, as amended. The undertaking resulted in an Adverse Effect to the NRHP-eligible WSSH Shuttle

Landing Facility District. To mitigate the adverse effects, NASA completed HAER Level II documentation of the historic district and relocated the Control Tower to the WSMR Museum for conservation, exhibition, and public interpretation.

The mitigation plan was defined in a Memorandum of Agreement (MOA), executed between NASA, the U.S. Army, and the NM-SHPO in August 2012. The properties within the historic district were documented with large format photography in March 2012.
