Location: White Sands Missile Range
Eastern end of Runway 23/05 (two trailers)
Northern end of Runway 17/35 (two trailers)
White Sands vicinity
Doña Ana County
New Mexico

U.S.G.S. 7.5 Minute Las Cruces, New Mexico, Quadrangle, Universal Transverse Mercator Coordinates (center of runways): E 32.944408 N 106.41993 Zone 13S, NAD 1983

Construction: ca.1992

Architect: Not known

Builder: Not known

Present Owner: Commander, U.S. Army White Sands Missile Range, New Mexico 88002-5018

Present Use: Vacant

Significance: The Xenon Control Trailers were an essential component of the White Sands Space Harbor (WSSH) from 1992-2011. They are considered to have national significance and are eligible for listing in the National Register of Historic Places (NRHP) under Criterion A for their association with the NASA Space Shuttle Program (SSP) with a period of significance of 1976-2011. Because they achieved significance within the past fifty years, Criterion Consideration G also applies.
Report

PART I. HISTORICAL INFORMATION

A. PHYSICAL HISTORY

1. DATE OF CONSTRUCTION

The Xenon Control Trailers were relocated to WSSH ca.1992.

2. ENGINEERS

Not known.

3. BUILDER/CONTRACTOR/SUPPLIER

Not known.

4. ORIGINAL PLANS

Not available.

5. ALTERATIONS AND ADDITIONS

All electronic equipment and portable xenon lighting was removed from 2011-2012. The U.S. Army initiated occupation and reuse of the facility in the summer of 2012.
PART II. STRUCTURAL/DESIGN INFORMATION

A. GENERAL DESCRIPTION

1. CHARACTER

Twin portable trailers housing xenon lights were located at the north end of Runway 17/35 and the east end of Runway 23/05. Flanking either side of the runway 1,000’ into the overrun, these twin units were repurposed semi-trailers that stored xenon navigational lights. Openings were created along the sides to allow the portable xenon lights to be protected from the weather when not in use. Metal stairs painted yellow allowed access to pedestrian entrances. The exteriors exhibited a red and white checkerboard paint scheme, which enhanced their visibility on the Alkali Flat. These semi-trailers were relocated to WSSH and installed around 1992. The portable xenon lights were removed from the trailers from 2011-2012.

High-intensity xenon lights illuminated the touchdown zone to support orbiter landings in darkness since the orbiter had no landing lights of its own. Each light trailer contained three xenon lights capable of producing 24,000,000 candelas. The lights also provided illumination of the reflective side, centerline, and distance-to-go markers. The light trailers were powered by their own generators.

2. CONDITION OF FABRIC

When documented in March 2012, the Xenon Control Trailers had been abandoned for over six months, but were in fair condition. The interior equipment had been removed and the exteriors were showing signs of neglect due to the harsh desert environment, which requires that facilities are constantly maintained and repaired due to shifting sands, flash floods, and extreme temperature variations.
B. CONSTRUCTION

The Xenon Control Trailers were repurposed semi-trailers.

C. MECHANICAL/OPERATION

The Xenon Control Trailers featured electricity to power interior lights and electronic navigational equipment.
PART III. SOURCES OF INFORMATION

A. ENGINEERING PLANS AND DRAWINGS

There are no known engineering plans or drawings of the Xenon Control Trailers.

B. EARLY VIEWS AND HISTORICAL DATA

Historic photographs and maps of the WSSH are very limited. Historical views of the Xenon Control Trailers can be found on pages 17 and 18 of this document. All views are captioned and dated as available. The other historical data comes from a variety of sources cited in the Bibliography below.

The historic photographs and most of the historical data used in this documentation came from sources within WSTF and WSSH. Other more current imagery was obtained from the online WSTF Media Archive. Many of the original photographs have been donated to the WSMR Museum for digitization and curation. A body of recent aerial photographs were located and photocopied for inclusion in the HAER document to supplement the current ground photography.

C. INTERVIEWS

The following NASA and WSMR employees were interviewed for this documentation.

Robert E. Mitchell, WSTF Manager, September 2011.

Frank Offutt, WSSH Manager, September 2011.

Timothy Davis, WSTF Historic Preservation Officer, September 2011 and March 2012.

Bill Godby, WSMR Historic Preservation Officer, September 2011.

Doyle Piland, WSMR Museum Archivist, September 2011.

E. LIKELY SOURCES NOT YET INVESTIGATED

Research was conducted at WSSH and WSTF using primary and secondary sources. Sources that were not investigated that may contain secondary information are archived at NASA’s Lyndon B. Johnson Space Center in Houston, Texas.

Additional oral history interviews with other engineers and technicians could also prove useful.
PART IV. PROJECT INFORMATION

In 2011-2012, New South Associates (NSA), under contract with InoMedic Health Applications, LLC (IHA) of Kennedy Space Center, Florida, and in coordination with NASA and the U.S. Army, conducted background research and a historic architecture survey of resources at the NASA WSSH. The survey included the documentation and evaluation for NRHP eligibility for seventy-two resources located in four distinct areas. Based on this research, NSA determined that no properties remain at WSSH from the period prior to NASA acquisition in 1963 except for the footprint of the packed gypsum Runway 17/35.1

NSA recommended that the three NASA WSSH Runways and the Control Tower in Area 1 were individually eligible for listing in the NRHP and eligible as contributing resources to the “WSSH Shuttle Landing Facility District” under Criterion A and Criterion Consideration G for their association with the NASA SSP. None of the other sixty-eight inventoried properties were recommended individually eligible for listing in the NRHP due to lack of historical association with the NASA SSP or other historic contexts, lack of unique design or construction features, or insufficient integrity; however, nineteen of these properties, all of which lie within Area 1, were recommended as contributing resources to “WSSH Shuttle Landing Facility District,” even though they were not recommended individually eligible for the NRHP. The historic district contains a total of twenty-eight resources: twenty-three are contributing and five are non-contributing.

After formally ending the SSP on August 31, 2011, NASA disposed of the WSSH and released use of the property to the U.S. Army WSMR. The property transfer was a federal undertaking on federally-owned property and subject to compliance with Section 106 of the NRHP Act of 1966, as amended. The undertaking resulted in an Adverse Effect to the NRHP-eligible WSSH Shuttle

---

Landing Facility District. To mitigate the adverse effects, NASA completed HAER Level II documentation of the historic district and relocated the Control Tower to the WSMR Museum for conservation, exhibition, and public interpretation.

The mitigation plan was defined in a Memorandum of Agreement (MOA), executed between NASA, the U.S. Army, and the NM-SHPO in August 2012. The properties within the historic district were documented with large format photography in March 2012.
